Ref. C1110STR

DropSens launches **Screen-Printed Carbon Electrodes** (SPCEs) modified with **Streptavidin** from *Streptomyces avidinii*.

Streptavidin modified SPCEs provide a stable **high affinity surface** for a large amount of **biotinylated molecules**.

Streptavidin modified SPCEs are designed as a versatile platform for the development of several (bio)sensors.

Ceramic substrate: L33 x W10 x H0.5 mm

Electric contacts: Silver

The electrochemical cell consists on:

Working electrode(s): Streptavidin / Carbon

Auxiliary electrode: Carbon

Reference electrode: Silver

STR SPCEs are commercialised in 50 units packs individually packed. Store at 2- 8 ° C, protected from light.

Also, specific **connectors** that act as an interface between the screen-printed electrode and any potentiostat and other accessories are available at **DropSens**.
